DYNAMICALLY BALANCING LOAD FOR SERVERS
ABSTRACT OF THE DISCLOSURE

Dynamically balancing load for servers. Servers that are able to

respond to requests directed at the system are monitored for. After

5   discovery of a server, a performance metric is obtained for the discovered

server. The performance metric for the discovered server is stored in a

table. When a request is received, the request is routed to a selected

server in the system of servers based on the performance metric, wherein

the system of servers comprises the discovered servers.
